

Bibliography for Arithmetic Dynamical Systems

Joseph H. Silverman

January 27, 2016

This document lists a wide variety of articles and books in the area of arithmetic dynamics. It also includes some additional material that was referenced in *The Arithmetic of Dynamical Systems* (Springer-Verlag GTM 241) and some miscellaneous articles and books that I've referenced in my own work. Note that the numbering in this document does not match the numbering of references in GTM 241. Further note that I do not automatically update ArXiv preprints when they appear. Most recent published articles in arithmetic dynamics can be found by searching the 37P category on MathSciNet.
