Probability that a directed edge is on the LERW from the origin in $\mathbb{Z}^2 \cap \{y \geq 0\}$.

$\dfrac{5}{2\pi} - \dfrac{3}{4}$

$\dfrac{-6 + \dfrac{98}{3\pi} - \dfrac{64}{9\pi^2} - \dfrac{1024}{9\pi^3}}{-2 + \dfrac{62}{3\pi} - \dfrac{64}{9\pi^2} - \dfrac{1024}{9\pi^3}}$

$\dfrac{15}{2\pi} - \dfrac{9}{4}$

$\dfrac{15}{2\pi} - \dfrac{9}{4}$

$\dfrac{5}{2\pi} - \dfrac{3}{4}$

$\dfrac{16}{3\pi^2} + \dfrac{3}{\pi} - \dfrac{1}{2}$

$\dfrac{3}{2} - \dfrac{19}{\pi} + \dfrac{16}{3\pi^2}$

$\dfrac{1}{2\pi}$

$\dfrac{1}{2} - \dfrac{3}{\pi}$
